

## Assignment - 2

### Introducing Relational Databases

① Which field of the customers table is the primary key?

Ans- CNUM is the primary key of the customer table, because in CNUM it uniquely identifies each customer in the table.

② What is the four column of the customers table?

Ans- The four column of the customers table is Rating.

③ What is the another word for row? for column?

Ans- In Row we called tuple or record and in column we called Attribute or ~~data~~ field.

④ Why is not it possible to see the first five rows of table?

Ans- In SQL, the tables are inherently unordered unless you explicitly sort them using ORDER BY clause. Therefore there is no guarantee of a 'first five rows' unless a specific order is defined.

⑤
